PREFACE

These indexes list all reviews published in Mathematical Reviews in 1973-79 (Vols.45-58) and include about 3,000 items within the scope of MR but not reviewed. The author index is similar to the three previous cumulative author indexes covering 1940-59 (Vols.1-20), 1960-64 (Vols. 21-28) and 1965-72 (Vols. 29-44). The subject index is in order corresponding to the AMS (MOS) 1970 subject classification scheme except for Sections 69 through 86. A complete list of the subject classification used is printed at the end of the subject index.

A star (★) preceding a title indicates a book or other non-periodical, reviewed as a whole.

1. ALPHABETICAL ORDER

Reviewed items are listed alphabetically by author; items having several authors are listed in full under each author (this was not done in the 1940-59 and 1960-64 cumulative indexes). Surnames consisting of more than one part (e.g., de Branges, van der Corput) are listed under the first capital letter. Collections, proceedings and other similar publications that may have editors but do not have specific authors are given alphabetically by title in a separate list (called the Key Index) following the list of authors. Individual articles in a collection are listed independently, under the names of the authors, if they were reviewed individually.

When two authors have the same name, such as Ivanov, A. V., their papers may have been listed in the index in a common entry.

2. CROSS-REFERENCES

There are four kinds of cross-references in this index.

(a) *Name variations.*

An author's primary name is simply the one name variation which MR has chosen on the basis of frequency and currency of usage. We will usually list all items by a given author under that author's primary name and cross-references to the primary form are given from sufficiently distinct alternative forms of the author's name that have been used in items reviewed.

(b) *Authors in other capacities.*

In the author index, the names of persons associated with an item in a capacity other than that of author (e.g., editor, translator, subject of a biography, etc.) are also listed. In the subject index, such names are given in parentheses in the positions that they would occupy had they been authors. In both indexes these items occur only as cross-references to complete listings.

(c) *Key entries.*

Certain collections that are listed under their titles, as described in Section 1 above, are also listed under other headings. For example, the publication entitled *Proceedings of the Symposium on Theory and Applications of Generalized Inverses of Matrices* is listed under the full title and also under the secondary headings 'Generalized inverses of matrices' and 'Symposium: Theory and Applications of Generalized Inverses of Matrices' and, for more recent entries, under the place and date of the meeting. These secondary headings have cross-references to the title of the entry where the full listing is given. There are also key listing cross-references to authored papers which contain extensive bibliographies or are obituaries. Where a key heading represents both the title of a work and a secondary key for another work, the full listings are first followed by the cross-references to full listings.

3. ARRANGEMENT OF ENTRY

The entries under a given heading (i.e., the primary name of an author, or a title) are listed in order of nominal publication dates. For this purpose co-authored items are treated on the same basis as those written by the author alone.

The arrangement of each title entry is that of the heading of the original review in MR. Titles in English, French, German and Italian are given as they appeared in the original, with no embellishments except for the mention of summaries in languages other than that of the item in question and, occasionally, of items such as discussion, comments, etc. Article titles in languages other than those mentioned are given in English translation (with the language of the original following in parentheses and accompanied by the mention of summaries in other languages). Book and monograph titles in languages other than those mentioned are given in the original language, the title being followed by the language of the original, in parentheses, and this being followed by an English translation of the title, in brackets.

The general form for title entries is as follows:

Books, Monographs: Title. (Language of original {if necessary}) [English translation of the title {if necessary}] Miscellaneous information {edition, editors, translators, series, etc.}. Publisher, city, date. Pagination. (Reviewer's name) Review number.

Journal article: Title of article. (Language of original {if necessary}). Summaries in languages other than the original {if necessary}) Journal abbreviation {including series number if necessary} volume number (volume number in first series if given) (nominal date), issue number {if necessary}, first page-last page (imprint date). (Reviewer's name) Review number.

4. TRANSLITERATION

The transliteration of names and titles in Russian follows the scheme that has been used by Mathematical Reviews since 1962, and appropriate variants are used for Bulgarian, Macedonian, Serbian and Ukrainian.

5. NAMES OF CHINESE AUTHORS

The name of a Chinese author is placed in the index as though it were in Western form. For example, Hua Luo-geng will be listed as Hua, Luo Geng, as though the author's name were L. G. Hua (in western form).

6. CONCLUSION

In an undertaking of this size some errors are inevitable, despite elaborate precautions and checks. The editors of Mathematical Reviews would be very glad to have their attention drawn to errors in this index and also in the earlier cumulative indexes.
